So, I'm just getting into Solar. I was going to go with a 48 volt system, they're cheaper, and from what I've read, generally better, you need double the batteries from a 24 volt system, but that also gives me far more battery life. However, from what I've seen, they appear to be more complicated as far as the solar panels are concerned.

Pros of a 24 volt System: Lower Financial Cost Compared to 12v System. Save a lot of \$\$\$ Higher Efficiency of Components and Wires; Higher Power Output from Smaller Components; 24 volts is considered a very "safe" voltage to work with Cons of a 24 volt System: You need a higher voltage solar panel array.

12V, 24V, and 48V: Which Voltage Is Best for Your Solar Power System? Over the last guide, we know how many components we need in a solar power system.
