

Should Albania's energy mix include more renewables?

While Albania's energy mix already features one of the highest shares of renewables in the region owing to its extensive installed hydropower capacity, the essential need remains for a more secure, cost-competitive national energy supply. Diversifying the electricity mix to include more renewables would strengthen Albania's energy security.

What is Albania's energy mix?

Hydropower accounts for the largest share of the country's electricity generation, representing around 95% of the Albania's installed power capacity. This means Albania's energy mix has one of the highest shares of renewable energy in South East Europe; however, it is also highly dependent on annual rainfall.

Does Albania have a strong focus on hydro vs non-hydro renewables?

The Albanian Renewable Energy Association, due to the country's history of hydropower production, has a stronger focus on hydro than non-hydro renewables.

How can Albania achieve a more diversified energy mix?

Albania's path towards a more diversified energy mix requires an accelerated uptake of renewable energy in end-use sectors such as transport, and heating and cooling.

Does Albania have a hydro power plant?

Albania's domestic generation is almost entirely dependent on hydropower since the country's only thermal power plant is currently inoperable. The total installed generation capacity has increased over the last few years because of new private investments in hydro power plants and more recently in small solar farms.

What is the main source of electricity in Albania?

Hydropower accounts for the largest share of the country's electricity generation, representing around 95% of Albania's installed power capacity. As a result, the country is highly dependent on annual rainfall for electricity generation, leading to notable fluctuations in domestic energy production.

A resilient renewable energy mix could create export opportunities for Albania, which could see electricity and hydrogen, produced using renewable energy, being exported to key European demand centers.

Albania: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO<sub>2</sub> - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

View Albania's Energy Intensity Level of Primary Energy: MJ per PPP of (GDP) Gross Domestic Product 2017 Price from 2000 to 2022 in the chart: max 1y 5y 10y. Apply. max 1y 5y 10y. Apply. Energy Use:

Today, Albania remains a net energy importer as domestic energy production is not able to meet demand. When it comes to renewable energy imports, Eurostat data shows that the country ranks 8 th in Europe. This is even greater than the dependence of other countries in the Balkan region which have fewer renewable resources to expand their ...
