What is phase change heat storage for solar heating?

Phase change capsules (PCC) of paraffin wax are stacked over various sieve beds to create porous layers of heat storage in a new method of phase change heat storage for solar heating reported by Chen and Chen (2020) [103]. The flow of heated air in the system is propelled by the buoyancy force produced by the solar chimney.

Does phase change energy storage (PCEs) work?

The scientists found that the adoption of such a phase change energy storage (PCES) device had a good effect. Backscattering of solar radiation out from solid state PCM was a drawback of the selected PCM, resulting in losses in heat and light gains.
