

o BNEF's 1H 2024 Corporate Energy Market Outlook shows that a surge of activity in Europe was the biggest catalyst in record activity o Big tech remains a large contributor of PPA growth o ...

The global energy storage market is growing faster than ever. Deployments in 2023 came in at 44GW/96GWh, a nearly threefold increase from a year ago and the largest year-on-year jump on record. BloombergNEF expects ...

According to BNEF's 1H 2024 Energy Storage Market Outlook, 67 GW/155 GWh will be added in 2024. The US will be the second largest market, propelled by state targets, utility procurements and attractive merchant economics in ...

Projects delayed due to higher-than-expected storage costs are finally coming online in California and the Southwest. Market reforms in Chile's capacity market could pave the way for larger energy storage additions in ...

The New Energy Outlook presents BloombergNEF's long-term energy and climate scenarios for the transition to a low-carbon economy. Anchored in real-world sector and country transitions, it provides an independent set of credible scenarios covering electricity, industry, buildings and transport, and the key drivers shaping these sectors until 2050.

World Energy Outlook 2024 Extended Dataset Includes more detailed information at regional and country-level for APS, STEPS across projected years (2030, 2035, 2040, 2045, 2050) as well as historical data (2010, 2022, 2023), Advanced Economies aggregated figures for NZE, and WEO chapters figures, investments, fossil fuel prices, etc.

Battery overproduction and overcapacity will shape market dynamics of the energy storage sector in 2024, pressuring prices and providing headwinds for stationary energy storage deployments. This report highlights the most noteworthy developments we expect in the energy storage industry this year.

Source: BloombergNEF. Note: Required spread for a two-hour battery project assuming revenues cover project costs of EUR360,000/MWh in 2024, for previous years assumes BNEF's Europe energy storage system costs. Assumes 90% ...

The global energy storage market is growing faster than ever. Deployments in 2023 came in at 44GW/96GWh, a nearly threefold increase from a year ago and the largest year-on-year jump on record. BloombergNEF expects 67GW/155GWh will be added in 2024,...

London, December 3, 2024 - European governments face an uphill battle if they are to deliver rapidly approaching and legally binding 2030 climate goals, according to New Energy Outlook: ...

In January 2024, France's energy regulator CRE reopened a postponed auction for secondary reserve/aFRR due to an increase in BESS capacity (Energy Storage News, 2024). There are expectations of enhanced participation in battery-based storage in the near term and France should deploy 300MW a year of BESS capacities over the coming years.

London, May 21, 2024 - Although time is running out, BloombergNEF's New Energy Outlook 2024 shows how the world could still achieve the major goal of the Paris Agreement - holding ...

BNEF's Energy Storage Market Outlook series unveiled that 2022 was the global energy storage's record addition. However, the growth is expected to continue in the following years. BNEF is forecasting a 23% compound annual growth rate until 2030, with annual additions reaching 88GW or 278GWh.

In 2024, the global energy storage is set to add more than 100 gigawatt-hours of capacity for the first time. The uptick will be largely driven by the growth in China, which will once again be the largest energy storage market globally.

The global energy storage market is set for another record year. BloombergNEF expects 69GW/169GWh of additions in 2024, up 76% in gigawatt-hours from 2023. China continues to lead installations thanks to provincial co-location mandates, but a slight...

The global energy storage market is growing faster than ever. Deployments in 2023 came in at 44GW/96GWh, a nearly threefold increase from a year ago and the largest year-on-year jump ...
