Bouvet Island is the remotest island in the world; it is located at a very southern point in the Atlantic Ocean. The entirety of the 19 square miles is indeed desolate. The original discovery can be traced back to Jean-Baptiste Charles Bouvet de Lozier in 1739; however no one was able to find it due to his inaccurately recorded coordinates.

Bouvet Island (/ ' b u: v eI / BOO-vay; Norwegian: Bouvetøya [3] [bu'vè:oeY?]) [4] is an uninhabited subantarctic volcanic island and dependency of Norway. It is a protected nature reserve, and situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge, it is the world's most remote island.

On January 1, 1739, French Commander Jean-Baptiste Charles Bouvet de Lozier made an extraordinary discovery: a volcanic island so remote that it lies 2,600 km (1,600 miles) from the nearest inhabited land.

Batterie pro FVE jsou nezbytnými komponenty fotovoltaických systému pro bytové domy, které umoíní efektivní vyuzití solární energie a maximalizaci úspor. Správný výber, umístení a údrzba akumulacních baterií jsou klícové pro optimalizaci výkonu

fotovoltaičké systémy a zajištění dlouhodobé spolehlivosti a ...
