

# British laser weapon energy storage system

What can the UK do with high-energy laser weapons?

The UK envisages high-energy laser weapons, like DragonFire, onboard future Royal Navy warships, British Army armoured vehicles and fighter aircraft of the Royal Air Force, including the BAE Systems Tempest; [16] it aims to demonstrate these concepts on board a Type 23 frigate and a Wolfhound armoured vehicle. [17]

Will Raytheon bring a high-energy laser weapon system to the UK?

As previously revealed by Army Recognition on February 29, 2024, Raytheon UK has contributed significantly to this technological advancement, bringing its High-Energy Laser Weapon System to the UK in partnership with several British suppliers.

Who makes a high-powered laser system in the UK?

First trial on British Army vehicle for high-powered laser system The British supply chain includes: Raytheon UK, Frazer-Nash, NP Aerospace, LumOptica, Blighter Surveillance Systems, and Cambridge Pixel. James Gray, chief executive and managing director of Raytheon UK, said:

What is a HELWS laser weapon?

The lightweight, portable HELWS is the first laser weapon integrated into a land vehicle and fired in the UK by a British Army vehicle, according to the MoD and Raytheon.

How many high-energy laser weapons have been delivered to the US Army?

Eight high-energy laser weapons have been delivered to the U.S. Army, demonstrating efficacy against over 400 targets across 25,000 operational hours. The DragonFire Laser Directed Energy Weapon program, led by Dstl on behalf of the British MoD, represents another development in British laser technologies.

Can a laser weapon be used on a land vehicle?

James Gray, chief executive and managing director of Raytheon UK, said: "In successfully firing the first laser weapon integrated on a land vehicle in the UK, Dstl has proven that the Raytheon high energy laser weapon system can track, engage and defeat targets whilst mounted on a vehicle.

For the first time scientists and engineers have successfully fired a high powered laser energy weapon from a British Army combat vehicle. This ground-breaking test, conducted at Dstl's range in Porton Down, saw the ...

3) Its energy demands are met by a joint UK-US developed flywheel energy storage system (FESS) developed by the Williams Formula 1 team. Which stores rotational energy when the clutch is disengaged and ...

The DragonFire Laser Directed Energy Weapon (LDEW) system has successfully fired a laser weapon against aerial targets during a trial at the MOD Hebrides Range, marking the UK's first high-power test of a laser ...

# British laser weapon energy storage system

OverviewCharacteristicsDevelopmentOperatorsSimilar weaponsSee alsoDragonFire uses UK-pioneered beam-combining technology to deliver a laser beam with increased power density, reduced defeat times and increased effective range. This is achieved, in part, through the use of tens of glass fibres; however, the full technical approach remains classified. The laser and its associated targeting systems, including an electro-optical camera and second lower-power laser for imaging and tracking, are mounted to a turret. The laser is reporte...

The lightweight and portable high-energy laser system from Raytheon UK, also known as the High-Energy Laser Weapon System (HELWS), is the first laser weapon integrated into a land vehicle to be fired in the United ...

The lightweight, portable HELWS is the first laser weapon integrated on a land vehicle to be fired in the UK. This milestone marks a major leap forward in the UK Ministry of Defence's Land Laser Directed Energy ...

DragonFire laser directed energy weapon fires during a trial of the weapon by the UK Ministry of Defense (MOD) at the MOD's Hebrides Range, January, 2024 ... miniaturised and more-efficient energy storage systems ...

Tests run on a high-energy laser weapon system mounted on a British Army vehicle not only underline the potential enhanced technology holds for modern warfare, but it also spells out ...

A British Army vehicle has trialed a speed-of-light laser weapon for the first time. (Dstl via SWNS) By Dean Murray via SWNS. A British Army vehicle has trialed a speed-of-light laser weapon for the first time.. The ground ...
