The production of cement in this tiny land-locked east African country will provide a cheaper source of cement. According to Managing director, Aime Mananda, a 50kg bag of cement made in Burundi will be sold at about 19,000 Burundian francs (US\$19), a difference of just over US\$1, compared with imported cement.

Lithium batteries are increasingly used to store energy, but are limited by high cost, safety concerns, leaking of electrolytes, and low capacity. Recently, cement-based batteries have emerged as a viable alternative to lithium batteries. Indeed, the porous structure of cement and cement microcracks provide routes for ionic solutions to pass through. Here, we review ...

related to cement-based battery systems. In addition to the earlier works, the scope for future works in the development of cement-based batteries and the current work in progress from the authors" front are reported as well.
