

Who is elexo energy?

At Elexo Energy, we are committed to excellence in everything we do. We are passionate about creating superior energy storage solutions that enable electrification of transportation with the best efficiency and safety. Our team is dedicated to pushing the boundaries of what is possible and making a positive impact on the world.

How will Chile's energy reforms impact the economy?

As these reforms take shape, they promise to significantly impact the overall sustainability and economic viability of the nation's energy infrastructure. Chile has embarked on an ambitious journey towards energy transition, framed by its commitment to combat climate change and promote sustainable growth.

Why is Chile moving towards a greener energy matrix?

Recognizing the crucial role of the electrical industry in environmental sustainability, Chile is pushing towards a greener energy matrix, by means of robust regulatory reforms and significant infrastructural upgrades. At the center of these infrastructural upgrades is the expansion of Chile's electrical transmission system.

How can Chile achieve a complete elimination of electricity emissions by 2050?

Chile's approach integrates a comprehensive institutional framework aiming at the complete elimination of emissions from electrical energy sources by 2050. This goal requires important modifications across various sectors, with a special focus on enhancing the electrical transmission systems to support a renewable energy-led infrastructure.

Is Chile equipped for a high amount of renewables?

It's [not equipped] for such a high amount of renewables, as [is the situation] today. There are already more renewables than distribution capacity," says Miguel Arrazte, Chile's director of Acciona Energía, a business dedicated to renewable energy solutions. Added to this, he says, is the low remuneration that renewable energy generation receives.

Can Chile become a green energy revolution?

This is allowing Chile to position itself as a benchmark in the coming revolution in the energy world: that of green hydrogen. For this sort of green miracle to become a reality, however, it still has to overcome a major hurdle: the development of the electric distribution network.

Chile's clean energy transition has been broadly supported by parties from across the political spectrum and backed by the public. 91% of Chileans believe that climate change should be treated as a government priority, according to the Yale Program for Climate Change Communication. Last December, Chile's centre-right government published the country's first ...

As frequent readers of Energy-storage.news might know, the majority of BESS projects built and in construction in Chile are paired with a solar PV project. Although a standalone project, the Arena BESS facility is still located in the northern region of Chile, where most of the solar PV capacity is located, due to its high irradiation levels.. Its proximity to solar resources ...

Nearly 2 GWh of renewable energy was curtailed in Chile in March of 2024, with a heavy concentration in the Northern regions of Atacama and Antofagasta. 2 Both regions, according to AMI estimates as of April 2024, have a BESS pipeline of 4.8 GW, 1.6 GW of which are assets already under construction or have an approved environmental license.
