

Can energy islands support the production of off-grid renewable electricity?

This feature article draws DNV's picture of how energy islands could support the production of off-grid renewable electricity and the decarbonization of hard-to-abate sectors, through supporting hydrogen and other e-fuel production.

Can energy islands help decarbonize the grid?

Regions such as Greater China are prioritizing employing energy islands to generate renewable power to decarbonize the grid, whereas Europe is focused on both grid decarbonization and dedicated hydrogen production. Initially, many energy island concepts will mainly serve as electricity distribution hubs.

Do Islands have off-grid power plants?

Most islands worldwide have off-grid generation systems made up of thermal power plants, thus affecting the cost of electricity and the reliability and safety of the power supply [8,22]. However, their energy transition can be accelerated thanks to their abundant RE resources [22,23].

Do off-grid projects provide electricity to remote communities?

This report provides analysis of nine, sustained off-grid projects providing electricity to remote communities around the globe. It aims to contribute to a greater understanding of viable, replicable delivery models and their success factors.

How can re be implemented on islands with no interconnection?

On islands in which there is no interconnection with the mainland, the implementation of RE requires an in-depth understanding of the context to guarantee energy security, access to electricity, a match between supply and demand, lower electricity prices and acquiring responsibilities for combating climate change.

Why do remote coastal and island communities face high energy costs?

Due to their geographic isolation, remote coastal and island communities often face high energy costs and vulnerable energy infrastructure due to their increased risk of natural disasters and climate change. Watch this video to learn more about the program.
