In a statement issued to Cook Islands News last night, TAU said Thursday's outages were directly attributable to the load control challenges brought on by network reconfiguration necessary for power supply, as a result of the cross- island cable fault. The recent upgrades have not directly caused these issues, the power supplier said.

The Cook Islands is a net importer of energy, in the form of petroleum products. Total energy consumption was 1,677,278,000 BTU (1.77 TJ) in 2017, of which 811,000,000 (0.86 TJ) was in the form of oil. [1] In 2012 47% of imported oil was used in the transport sector, 30% in aviation, and 27% for electricity generation. [2] Electricity consumption is 31.6 GWh, from 14 MW of installed ...

As of 2022, the state of electricity consumption in the Cook Islands illustrates a balanced yet elementary mix of energy sources. Approximately half of the electricity generated comes from low-carbon sources, with solar energy contributing entirely to this segment. The other half is derived from fossil fuels, indicating that the Cook Islands is equally dependent on high-emission energy.
