This page lists the main power stations in Guinea contributing to the public power supply. There are also a number of private power plants supplying specific industrial users such as mines and refineries. Guinea is considered to have considerable renewable energy potential. Schemes at an advanced state of development are included.

The German company is currently working on an 82 MW solar project in Guinea, one of the largest independent solar power production projects in the West African region. The project, spread over two sites, will bring clean and cost ...

Guinea, which is known as "the Water tower of Africa", could be the main player in the electricity market in West Africa. The country is planning, with the support of TFPs, to build facilities to generate electricity from renewable water and solar energy sources so as to diversify its energy mix, and also to electrify rural areas through ...

The German company is currently working on an 82 MW solar project in Guinea, one of the largest independent solar power production projects in the West African region. The project, spread over two sites, will bring clean and cost-effective energy to the port city of Kamsar via a mini-grid with 12 km of grid extension and to the city of Boké; ...
