

How much power does the Democratic Republic of the Congo have?

The Democratic Republic of the Congo has reserves of petroleum, natural gas, coal, and a potential hydroelectric power generating capacity of around 100,000 MW. The Inga Dam on the Congo River has the potential capacity to generate 40,000 to 45,000 MW of electric power, sufficient to supply the electricity needs of the whole Southern Africa region.

Is the Democratic Republic of the Congo an energy exporter?

One of the Inga dams, a major source of hydroelectricity in the Democratic Republic of the Congo. The Democratic Republic of the Congo was a net energy exporter in 2008. Most energy was consumed domestically in 2008. According to the IEA statistics the energy export was in 2008 small and less than from the Republic of Congo.

How does the Democratic Republic of the Congo support the economy?

In the AC, Democratic Republic of the Congo supports an economy six-times larger than today's with only 35% more energy by diversifying its energy mix away from one that is 95% dependent on bioenergy.

How much electricity does the DR Congo import?

The DR Congo imported 78 million kWh of electricity in 2007. The DR Congo is also an exporter of electric power. In 2003, electric power exports came to 1.3 TWh, with power transmitted to the Republic of Congo and its capital, Brazzaville, as well as to Zambia and South Africa.

What is the Congo Energy Atlas?

This Atlas was created by the UNDP, Netherlands Development Organization SNV, and the Congolese Ministry of Water Resources and Electricity. It has 600 interactive maps and informs policymaking on decentralizing energy and encourages further renewable energy investments.

How will Nuru empower 5 million Congolese people?

By delivering world-class renewable energy and connectivity services, Nuru aims to empower 5 million Congolese people, one connection at a time. Moving ahead, it will be important to strengthen the public sector and the government's capacity for cross-unit delivery in order to effectively finance renewable energy mini and metro-grids.

Democratic Republic of Congo: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Less than 10% of the population has access to electricity today, making Democratic Republic of the Congo the country with the largest number of people without access in Africa after Nigeria. Mini-grids account for ...

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided
