

Which natural gas companies are in Lithuania?

Natural gas companies in Lithuania include Lietuvos Dujos and Ignitis. In 2021 Lithuania used coal to generate 2% of the country's electricity. Renewable energy includes wind, solar, biomass and geothermal energy sources.

How much energy does Lithuania produce a year?

The energy intensity to GDP fell by 4%/year between 2000 and 2022, compared to 2%/year in the European Union. Apart from a marginal production of around 30 kt, Lithuania imports all its crude oil (8.4 Mt in 2022, mainly from Russia).

Why is Lithuania investing in alternative energy import routes?

This is because ever since the reestablishment of its independence, Lithuania has been investing in alternative energy import routes. These included the development of the Butinge oil terminal, the electricity interconnections NordBalt and LitPol Link, the Klaipeda LNG terminal and the Gas Interconnection Poland-Lithuania.

The Lithuanian energy market is developing, new service providers appear in the market every year, new alternatives of more environmentally friendly energy appear, price changes take place, new power generation options appear.

Spain's Iberdrola has started construction of what it has hailed as an innovative combined cycle power plant in Lithuania. The utility's engineering arm, Iberdrola Ingenieros, is building the 440 MW plant in Elektranai, 40 km from Vilnius on a turnkey basis for state-owned utility Lietuvos Elektrine AB.
