Energy in Paraguay is primarily sourced from hydropower, with pivotal projects like the Itaipu Dam, one of the world's largest hydroelectric facilities. This reliance underscores the need for a robust infrastructure, including efficient transmission networks and distribution systems, to leverage the country's renewable resources fully. Despite its extensive hydroelectric capacity, Paraguay faces environmental challenges, notably deforestation

Drought conditions which steadily worsened during 2020 and 2021, linked to deforestation in the Amazon Rainforest, have led to an energy crisis for operations at hydroelectric plants dependent on the Paraná River and Paraguay River.
