

What is solar energy used for in Finland?

Solar energy in Finland is used primarily for water heating and by the use of photovoltaics to generate electricity. As a northern country, summer days are long and winter days are short. Above the Arctic Circle, the sun does not rise some days in winter, and does not set some days in the summer.

How much solar power does Finland produce in 2022?

The Finnish Energy Authority states that in 2022, solar power production amounted to nearly 635 megawatts—more than a 240 megawatt increase compared to the previous year. Finland still produces fairly little solar electricity compared to leading European countries. The Netherlands, in contrast, produce over seven times more per capita.

How many solar panels are installed in Finland?

Finland's production capacity is 16 000 m<sup>2</sup> /a. New installations were: 2 380 m<sup>2</sup> (2006), 1 668 m<sup>2</sup> (2005) and 1 141 m<sup>2</sup> (2004). There are growth opportunities in the solar heating. In 2018 S-Ryhmä decided to order solar panels for 40 of its commercial real estate buildings. This is the biggest solar panel project in Finnish history.

Will there be a solar park in southern Finland?

Solnet has started planning southern Finland's largest solar park, together with Finnish investment company H.G. Paloheimo. Large-scale solar parks will be established in the region with solar panels planned to amount to 140 MWp of generation capacity.

Can solar power improve the profitability of buildings in Finland?

LUT University has investigated how the profitability of solar electricity could be improved in different types of buildings in Finland. Researchers have debunked myths related to the orientation and dimensioning of solar photovoltaic systems and sales of surplus electricity.

What is Finland doing with solar technology?

Finland has made impressive strides in solar technology. For example, Solnet Group has invested heavily in research and development, leading to energy storage possibilities and grid optimization. These advancements are critical for optimizing grid operation and stabilizing energy consumption.
