

Could energy storage batteries prevent future power cuts in Gibraltar?

PLANS to set up energy storage batteries at the North Mole Power Station could prevent future power cuts in Gibraltar. The ten new prefabricated

How does a Bess system work?

The BESS acts as a dynamic energy reservoir and power provider. It efficiently accumulates excess energy generated by the solar panels or surplus power produced by the generator. When the battery is full, the system discharges the stored energy to ensure a stable and continuous power supply.

Why should a company use Bess?

BESS supplies zero-emission power. Users can minimize their company's carbon footprint and environmental impact, helping them meet sustainability goals and regulatory requirements. The use of BESS reduces diesel engine runtime to deliver long-term fuel savings.

As you can see the total power required for this machine is around 62kw. This is when you are using the network. If you are using a diesel generator you need to consider that when these motors are starting they will need a current 3 times higher than their normal current. this means that you need to multiply the rated current by 3 to have the generator capacity.
