

Should I use a grid-tie or off-grid Solar System?

A grid-tie solar system with battery back-up is the best solution if you are currently connected to the grid and want a solar back-up for grid outages. An off-grid solar system is the best solution if you do not have access to the grid and don't want to depend on a generator only. Can I still utilize my solar energy during the night?

Is a grid-tie Solar System a viable option?

If your monthly electricity bill exceeds BZD 500 and your energy consumption is mostly during the day, then adding a grid-tie solar system with or without battery back-up is more economically viable than going completely solar off-grid. Will my grid-tie solar system stay on during a grid outage?

What is a grid-tie Solar System?

A grid-tie solar system is the best solution if you are currently connected to the grid and want to save on your utility bill. A grid-tie solar system with battery back-up is the best solution if you are currently connected to the grid and want a solar back-up for grid outages.

Will Belize Electricity compensate you for excess solar energy?

The hope is that through regulations, Belize Electricity Ltd will have to compensate you for excess solar energy flowing to the grid during the day and off-set it against the electricity you are drawing from the grid at night; however, the reality today is the opposite.

What is a grid-tie solution?

Our Grid-tie Solution connects directly to the electricity grid, generating clean energy while reducing your electricity bill. Designed for customers with high electricity demand during the day, this solution maximizes the use of solar power while maintaining a consistent connection to the grid.

Sun's Electric, with over 18 years experience offers design, installation, monitoring, maintenance, and repair of grid tied and off grid solar PV systems by a licensed electrician.

Grid-tie solar systems with battery back-up will stay on during a grid outage and provide electricity for selected appliances. Grid-tie solar systems without battery back-up are required to shut off automatically for safety reasons.

Solar panel systems in Belize can be Off-Grid, Grid-Integrated, or Grid-Tied. Off-Grid systems are completely self-contained and self-sufficient, providing 24-hour electricity to homes, hotels, resorts, and farms. Grid-Integrated systems are connected to the national grid but also have batteries to store and supply power.

Solar panel systems in Belize can be Off-Grid, Grid-Integrated, or Grid-Tied. Off-Grid systems are completely self-contained and self-sufficient, providing 24-hour electricity to homes, hotels, ...

Generate your own electricity during the day, store surplus energy in a battery pack for night-time use or grid outages, and tap into the grid during low solar energy periods. This automated process ensures a stable and uninterrupted power supply.

Currently, Belize is seeing a rise in the purchase and use of Solar PV systems, for both grid-connected and off-grid use. Two major Solar PV companies in the central corridor of Belize have installed an average of 140 kW annually over the past three years, almost equally split between on-grid and off-grid. One company has done

Grid-Tied Solar Panel Systems are systems which are tied to BEL's Electric Grid and only partially provides you with energy from the Solar Panel System. Grid-Tied systems DO NOT have batteries to store power. Because of this, you would only be able to get power from your Grid-Tied system during sunny days only.
