

Who owns the electricity industry in Guyana?

The electricity industry is operated by the state-owned electricity company, Guyana Light and Power Inc. (GPL), with an installed operating capacity of 337 MW in 2020.

How will a gas to power project impact Guyana?

The gas to power project will have significant transformational benefits for Guyana: The gas to power project is expected to support diversification and a competitive economy. Investment in gas to power generation to lower electricity prices could foster development in new industries and sectors.

What type of electricity is used in Guyana?

The electricity sector in Guyana is dominated by Guyana Power and Light (GPL), the state-owned vertically integrated utility. Although most of Guyana's electricity comes from thermoelectric diesel-engine driven generators (226 MW of installed capacity), the country has a large potential for hydroelectric and bagasse-fueled power generation.

Which recommendations are applicable for Guyana's gas to power project?

The following recommendations are therefore applicable for Guyana's gas to power project. Adequate grid infrastructure, policy, and legislative changes are required to ensure that all Guyanese benefit entirely from the gas to power project.

Could a gas-to-power project improve Guyana's Electricity Reliability?

Guyana's plan to improve the reliability of its electricity and lower the cost of electricity through a gas-to-power project could be a critical pillar that ensures that the benefits of natural resource exploitation are broad-based this time around. The gas-to-power project has two phases:

How much power does Guyana generate?

Guyana had an installed power generation capacity of 226 MW in 2007, which is 0.4 kW per capita. This is lower than in other countries in the region and is hardly sufficient to cover the current demand for electricity in the country. Most electricity generation in Guyana uses Diesel engines to drive generators.
