

What kind of energy does Haiti use?

This page is part of Global Energy Monitor's Latin America Energy Portal. Haiti relies on a mix of imported oil and domestic biofuels such as wood and sugar cane for its total energy supply. As of 2020, more than 90% of electrical generation in Haiti was derived from fossil fuels and less than 10% from renewables.

How can Haiti improve energy resilience?

In the face of these obstacles, Haiti is forging a path toward energy resilience with support from USAID and the National Renewable Energy Laboratory (NREL). Central to this effort is the development of energy modeling frameworks and trainings, microgrids, agrivoltaics, and off-grid solar power to enhance energy resilience and security in Haiti.

Will USAID and NREL reshape Haiti's energy landscape?

In a bid to reshape Haiti's energy landscape, USAID and NREL will support Haiti's ministries and government in formulating the country's Integrated Resource and Resilience plan, which is a comprehensive energy sector master plan that envisions a sustainable, secure, and resilient energy future for Haiti.

Why is Haiti a poor country?

More than two centuries of foreign interference, political instability, economic constraints, and natural disasters have left the Caribbean nation one of the poorest in the world and among those with the highest rates of energy poverty. Haiti's energy access and infrastructure remain critically underdeveloped.

Can off-grid solar improve Haiti's energy access?

In parallel with other efforts like minigrid development and national grid planning, off-grid solar also has the potential to play an important role in advancing Haiti's energy access. As the name suggests, off-grid solar systems operate independently from the traditional electricity grid.

How is USAID partnering with NREL in Haiti?

USAID and NREL are partnering with Haitian stakeholders to boost workforce skills, build strong regulatory frameworks, and deploy advanced renewable energy technologies. Photo from Flickr About 49% of the population of Haiti had access to electricity as of 2022.

Haiti relies on a mix of imported oil and domestic biofuels such as wood and sugar cane for its total energy supply. As of 2020, more than 90% of electrical generation in Haiti was derived from fossil fuels and less than 10% from renewables.

Haiti: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Le secteur connaît des difficultés exacerbées par des pénuries récurrentes de carburant et la faible performance de l'entreprise nationale de services publics Electricité d'Haiti (EDH). En 2021, le taux d'accès à l'électricité était estimé à environ 47,1 %.

This document presents Haiti's Energy Report Card (ERC) for 2020. The ERC provides an overview of the energy sector performance in Haiti. The ERC also includes energy efficiency, technical assistance, workforce, training, and capacity building information, subject to the availability of data.

Haiti's energy access and infrastructure remain critically underdeveloped. In addition, Haiti relies heavily on imported fossil fuels, which are expensive, harmful to the environment, and exacerbate existing challenges to Haiti's energy sector.
