

The use of lithium ion batteries offers distinct advantages over conventional battery types, however in order to mitigate the risks associated with Li-ion batteries, Intertek offers testing and validation of lithium ion batteries, and lithium ion powered devices.

In addition to primary batteries of various types, Sonic Group also produces many kinds of high performance rechargeable nickel-cadmium, nickel-metal hydride, lithium-ion, lead-acid and other alkaline batteries to meet the extremely different requirements of a wide range of applications.

The team develops novel battery technology with negligible voltage decay, resulting in longer-lasting and more efficient batteries which hold great potential for various applications. The team's innovative approach focused on stabilising the honeycomb structure at the atomic level.

The team develops novel battery technology with negligible voltage decay, resulting in longer-lasting and more efficient batteries which hold great potential for various applications. The team's innovative approach ...
