Should I add battery storage to my solar PV system?

Adding battery storage to your solar PV system allows you to save any unused solar electricity to be used later on. Most domestic solar installations generate more power than is consumed at certain times, since solar generation is relatively steady while household demand changes frequently, sometimes even within minutes.

Is it worth getting a solar storage battery?

A solar battery allows you to store electricity produced by your solar panels and use it later or, in some cases, sell it back to the grid to make a few quid - but they're not cheap. Read on to see if it's worth getting a solar storage battery for your home... This is the first incarnation of this guide.

Can I Retrofit a solar battery to an existing solar PV system?

If you already own solar panels at home, that's not a problem; you can easily retrofit a solar battery to an existing solar PV system. When the solar battery is installed, it must be either AC-coupled or DC-coupled, and this depends on the type of inverter that your solar panels are using.

How long do solar batteries last?

Having a solar battery means you can store the excess electricity your solar panels generate, so you can use or sell this energy at a later time. Solar batteries can last between 15 and 30 years, come with a 10-year warranty - though their capacity might decline in their later years.

What is a solar battery?

A solar battery is a device that allows you to store the excess electricity your solar panels generate, so you can use or sell this energy at a later time. Unless there's someone at home and using electricity every minute of every day, you'll have solar power that goes unused - typically, about 50% of what your panels generate.

What is solar battery storage?

Solar battery storage is the ideal addition to a solar panel system. It can hugely increase your savings from the electricity your panels generate, allow you to profit from buying and selling grid electricity, protect you from energy price rises and power cuts, and shrink your carbon footprint.

If you have solar panels - but don't have a solar battery storage system - you can only use the energy from solar when conditions permit. So, you'll generate lots of green energy in the day. Without a battery, though, you won't have stored any ...

Without battery storage, a lot of the energy you generate will go to waste. That's because wind and solar tend to have hour-to-hour variability; you can't switch them on and off whenever you need them. By storing the energy ...
