

How to tell whether solar power generation is good or bad

How do I know if my solar panels are generating enough energy?

To determine if your solar panels are generating sufficient energy, there are several key indicators you can rely on. **Electric Bills:** Regularly monitor your electricity bills to observe any significant decrease in your energy expenses, indicating that your solar panels are effectively offsetting your electricity usage.

How do I know if my solar panels are bad?

Nevertheless, individual panels can fail faster than that. If you can do so safely, check the panels occasionally for any obvious signs of problems; for example, discoloured areas on the solar cells (usually a 'hot spot', where the panel overheated and was damaged). Can a cracked solar panel still be generating electricity?

The cracked panel may still be generating electricity but Ben Robinson, director of Exeo Energy, advises getting it replaced as soon as possible: "This will eventually result in issues, normally as soon as moisture enters the panel". See if you can get a replacement panel under warranty. If so, Mr Robinson advises that:

Do solar panels degrade over time?

Solar panels also degrade gradually over time. So, after a decade of ownership, your panels might produce slightly less power than they did when new. You can find the expected degradation of your panels on their datasheet (search online for it using their make and model: find this on your MCS certificate).

How do I know if my solar panels need maintenance?

Dust, leaves, or bird droppings can block sunlight and reduce efficiency. By monitoring your panels' efficiency, you can identify when they might need cleaning, maintenance, or even replacement. For example, if you notice a drop in efficiency, it could indicate that your panels are dirty or there's an issue with the system.

Why should you check voltage and current on your solar panels?

Regularly checking voltage and current ensures that your solar panels are generating the expected amount of power and helps you spot any potential issues early. By doing so, you can maintain optimal performance and prolong the lifespan of your solar power system.
