

What is Hyme energy?

Hyme Energy has developed a novel thermal energy storage solution based on the use of molten hydroxide salts as a storage medium. We store large amounts of energy, in the order of GWs, to dispatch as power and heat. Storage facilities will be built for use in utilities and in the industrial sector including fertilizer production.

Is Mayotte a good place to get electricity?

Electricity in Mayotte in 2015 was 95% thermal sources and 5% renewable energy. The multi-year energy program sets a target of 30% renewable energies in final consumption in 2020. Electricity needs are growing strongly due to the growth of Mayotte and its population, as well as the increase in electricity.

What is the energy sector like in Mayotte?

The energy sector in Mayotte is mainly oriented towards the consumption of electricity based on fossil fuels; renewable energies are currently underdeveloped for the moment, and there is no export of fossil fuels. Electricity in Mayotte in 2015 was 95% thermal sources and 5% renewable energy.

Why is Hyme Energy partnering with Semco Maritime?

"At Hyme Energy, we are proud to be able to expand our partnership with Semco Maritime. As we continue our product development, the partnership establishes a strong execution ability, so we can bring our plants to our industrial customers on time and on cost," says Ask Emil L&#248;vschall-Jensen, CEO and co-founder of Hyme Energy.

How many thermal power stations are there in Mayotte?

There are two thermal power stations in Mayotte, consisting of 17 diesel engines in all. The motors are of different powers (between 750kW and 8MW) and use different technologies. This makes it possible to adjust as needed.

When did Hyme energy close?

Hyme Energy closed its last funding round on Feb 28, 2024 from a Grant round. Who are Hyme Energy's competitors? Alternatives and possible competitors to Hyme Energy may include Evergen, Aquion Energy, and Ore Energy.

The port of Longoni generates most of the electricity in Mayotte. The energy sector in Mayotte is mainly oriented towards the consumption of electricity based on fossil fuels; renewable energies are currently underdeveloped for the moment, and there is no export of fossil fuels.

Two projects seek to make Hyme's energy storage solution more mature. The first demonstration facility in Esbjerg will demonstrate the potential for storing wind and solar energy for later ...

Two projects seek to make Hyme's energy storage solution more mature. The first demonstration facility in Esbjerg will demonstrate the potential for storing wind and solar energy for later conversion into steam.
