

Is it safe to install photovoltaic panels on the rooftop for thermal insulation

Can solar panels be installed on a roof?

Because solar panels are electrical equipment that increase fire risk and can complicate fire-rescue efforts, many of the world's leading insurance companies strongly advise that rooftop solar panels should only be installed on roofs made with non-combustible materials. Want to learn more?

Can solar panels be installed on a combustible roof?

In general terms, solar panels should not be installed on combustible roofs unless some form of fire protection can be installed between the panels and the roof e.g. concrete panels or pebble ballast. 3. Location of solar panels

Do you need planning permission to install solar panels on your roof?

An increasing number of people are investing in solar energy. More and more homes are having solar panels, or solar tiles, installed on their roofs. Of course, with such installations, the topic of planning permission and building regulations often comes to the surface.

Can a flat roof hold solar panels?

This is because a solar panel system usually weighs about 20kg per square metre, which the great majority of roofs can hold. However, flat roofs may not always be strong enough for solar panels. Drilling into a flat roof can cause leaks, so an installer will usually ballast the panels instead - but these will add around 80kg per panel.

Can a UK roof support solar panels?

As long as your roof is pitched, has enough unshaded space, and doesn't contain spray foam insulation underneath, it should be suitable for solar panels. The large majority of UK roofs are more than capable of supporting solar panels for as long as you need them to.

Can PV panels be installed on a new roof?

Where PV panels are to be installed on an existing roof, consideration should be given to the extra weight they will add. If you are planning to install panels on a new roof as part of a new build or reinstatement, it is important to be aware of the different risk implications of different roof types (e.g. flat vs pitched).
