

Omnis Solar Power proudly announces acquiring Class 1 fire certification for Italian markets. It has been able to secure the license after having successfully completed all related and relevant tests.

By explicitly retrofitting the power station, we preserved over 1200 local jobs while creating new opportunities for graphite production and ongoing energy innovation. Through our process, we produce Quantum Graphite(TM) by capturing the carbon that ...

What are the key differentiators of the proprietary Omnis technology OQR(TM) (Omnis Quantum Reformer(TM))? Modular design eliminates costs and challenges of hydrogen transportation and storage. Hydrogen production costs are significantly lower (>90%) compared to currently available alternatives such as electrolysis.

Due to a severe energy crisis and a clear need for energy transition, Omnis Power has begun investing in the European market. The first production site for the manufacturing of photovoltaic panels is located in Italy and is set to be inaugurated in ...

In 2024, the first photovoltaic module factory with a production capacity of 500 MW per year will be opened in Italy. The production lines will be very modern, fully automated, and robotic. In Lithuania, in cooperation with INVT Guangming Technology, Omnis Power Engineering factory will be opened by the end of 2023.

Developer of Omnis Quantum Pyrolysis technology intended to transform hydrocarbon into net zero energy. The company offers the production of clean hydrogen and high-grade graphite through a process that eliminates emissions and serves the energy industry by retrofitting existing power plants to reduce greenhouse gas emissions, enabling ...

By explicitly retrofitting the power station, we preserved over 1200 local jobs while creating new opportunities for graphite production and ongoing energy innovation. Through our process, we produce Quantum Graphite(TM) by capturing the ...
