

5 The federal government of Somalia has requested bids for a 10MWp solar PV plant with 20MWh of storage capacity, which would be the country's first utility-scale renewable energy plant. Sited in the Puntland capital of Garowe, the plant is part of a World Bank Group-funded programme to boost generation and create a new sub-transmission network.

MOGADISHU, SOMALIA - Somalia lacks a national power grid and relies on imported fuel, wood and charcoal to address its energy needs. But energy experts say with the longest coastline in mainland Africa and an average of 10 hours of sunshine per day, Somalia has great potential for onshore wind and solar power.

To promote environmental sustainability and reduce carbon emissions in Somalia, this study recommends that policymakers should prioritize encouraging renewable energy sources, such as hydropower, wind, and solar energy, through investment, subsidies, and regulatory frameworks to facilitate the transition away from carbon-intensive energy sources.

The project, developed by Kube Energy in collaboration with the government of the South West State of Somalia, and financed and further developed in partnership with CrossBoundary Energy, will establish the first hybrid solar power plant in Baidoa, Somalia.

Somalia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Somalia and its international peacekeeping missions face some of the highest energy costs in the world, with rates of energy access of less than 40% nationally, and only 11% in rural areas. Ongoing security and

governance challenges in the country further complicate Somalia's energy
