Hoymiles has announced the completion of Latvia''s first major energy storage facility, in which it has played a pivotal role. The Targale wind park, managed by Utilitas, the country''s largest wind energy producer, combines wind energy generation with advanced storage capabilities, setting a new standard for its renewable energy infrastructure.

This new energy storage system has a capacity of 20 MWh, enabling the park to store surplus energy generated during periods of high wind and supply it back to the grid when needed. The project represents a EUR7 million investment, underscoring Utilitas Wind's commitment to advancing sustainable energy solutions in Latvia.

The battery system is an essential infrastructure element for the security and stability of Latvia's energy supply. The batteries will work as modern accumulators for storing large volumes of energy, which will be important for ...

"It is planned to attract European Union co-financing to acquire electricity storage facilities, which will enable AST to significantly reduce the negative impact on the transmission tariff, which in turn, is to be expected in the context of meeting AST"s obligation to provide balancing reserve capacity.

Germany-based Rolls-Royce has been awarded a contract to supply two large-scale battery energy storage systems to Augstsprieguma tikls (AST), Latvia''s transmission system operator, with a ...

The largest energy storage battery system will provide energy storage to transfer the generated electricity to users when there is a shortage in the electricity system. The battery system includes six battery containers, three inverter/transformer container and one distribution point container, providing a total electric capacity of up to 20 MWh.

important for ensuring energy balance once the Latvian electricity supply grid works in sync with the European grid."

RIGA, Nov. 1 (Xinhua) -- Renewable energy company Utilitas Wind on Friday inaugurated the largest battery energy storage system (BESS) in Latvia to date, local media reported. Installed at the Targale wind farm in Latvia''s western municipality of Ventspils, the system can store up to 20 MWh and dispatch up to 10 MW of electricity.
