

What is energy in Malta?

Energy in Malta describes energy production, consumption and import in Malta. Malta has no domestic resource of fossil fuels and no gas distribution network, and relies overwhelmingly on imports of fossil fuels and electricity to cover its energy needs.

What type of electricity does Malta use?

Renewable electricity here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal power. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Malta: How much of the country's electricity comes from nuclear power?

Why does Malta need solar power?

Increases in energy costs worldwide have given new impetus to this work, since Malta imports nearly all its energy. The government continues to explore additional possibilities for solar power generation and employing other alternative energy sources such as wind power (see also Waste section for related opportunities).

What is Malta's energy security strategy?

Malta's strategy under the energy security dimension will continue to emphasize the government's commitment to achieving greater security of supply through the diversification of energy sources and suppliers and reduce energy import dependency primarily through the deployment of indigenous Renewable Energy Sources (RES).

Why is Malta connected to the European power grid?

Since 2015, the Malta-Sicily interconnector allows Malta to be connected to the European power grid and import a significant share of its electricity. At 4.9%, Malta had the lowest share of renewables as part of gross inland energy consumption in the EU in 2017.
