

Just seven days after the equipment arrived on site, the MOBILEPAC <sup>174</sup> was fully operational, providing 20MW of available electrical capacity to serve the island's grid via the Martinique EDF transmission network at Pointe des Carri<sup>232</sup>res power station.

includes the consolidation of aid for energy efficiency and renewable energy in companies, compared to the 2014-2020 operational programme. The RESOR project started on 1 June 2018. Its main objective is to support good practices in favour of greater energy efficiency and better integration of renewable energy in companies within European

Martinique's electricity authority, Electricit<sup>233</sup> de France S.A. (EDF), needed a fast-track power solution to provide electricity during high-demand periods, as well as bridging power while necessary improvements were performed to the

With the 14MW Grand-Rivi<sup>232</sup>re wind park inaugurated last month, and further projects on the way, Martinique has been making strides towards achieving its goal of being energy self-sufficient by relying on renewable energy by 2030. The Grand-Rivi<sup>232</sup>re wind park counts seven wind turbines, and will provide electricity to 10 000 homes - 5% of the

Targets Renewable Energy Energy Efficiency Transportation In Place Proposed Prepared by the National Renewable Energy Laboratory (NREL), a national laboratory of the U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy; NREL is operated by the Alliance for Sustainable Energy, LLC.

Martinique: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

The Grand-Rivi<sup>232</sup>re wind park counts seven wind turbines, and will provide electricity to 10 000 homes - 5% of the island's population. Further wind energy projects are already in planning stages, in the communities of Macouba and Ajoupa Bouillon.

Martinique consumed 36,175,538,000 BTU (0.04 quadrillion BTU) of energy in 2017. This represents 0.01% of global energy consumption. Martinique produced 239,538,000 BTU (0.00 quadrillion BTU) of energy,

covering 1% of its annual energy consumption needs.
