

Why should you invest in solar energy in Egypt?

Since 2014, Egypt has enacted various renewable energy legislations, laying the foundation for pioneering companies to thrive in the market. The companies that emerged and later became staples in the solar energy ecosystem play a crucial role in advancing solar energy solutions.

Where is electricity produced in Egypt?

The hydropower energy is concentrated in Upper Egypt, while wind energy is concentrated on Red Sea Coast. Additionally, bioenergy-based electricity is generated in one place with a capacity of 10 MW in Algalab Alasfar. Similarly, a single solar thermal power plant is under operation, which is located in Al-Kuraymat with a capacity of 20 MW.

Does Egypt use solar energy?

In 2020, solar energy in Egypt accounted for 1.9% of its total electricity production, making it the second-highest renewable energy source. Egypt is the second country in Africa after South Africa in solar energy utilisation, ranked thirty-first worldwide (IRENA, 2021).

Is Egypt a good place for solar power?

The International Energy Agency (IEA) reckons Egypt is one of the world's best regions for solar. Some companies agree, having invested in projects such as the Benban solar park, one of the world's largest, 650 km (400 miles) south of Cairo. Egypt's government has also tried to boost rooftop solar power by offering homeowners generous incentives.

How solar PV distribution technology is developing in Egypt?

Solar PV distribution technology is developing quickly in Egypt due to the development of several pipeline projects; where industries and businesses can link PV systems on a small scale to meet their increased energy demand and hence reduce their energy costs.

How much solar power does Egypt have?

The biggest chunk of Egyptian solar capacity is provided by the Benban project, which lies 50 km from Aswan and is one of the world's biggest PV sites. Official figures on its capacity vary from 1.4 GW up to 1.8 GW, with the confusion apparently centering on the scope for expansion of some individual elements.

One Mercury solar day (one full day-night cycle) equals 176 Earth days - just over two years on Mercury. ... The tremendous amount of energy that is released in such an impact digs a big hole in the ground, and also crushes a huge amount of rock under the point of impact. Some of this crushed material is thrown far from the crater and then ...
