

What percentage of Mongolia's Electricity is produced by coal?

Domestic consumption of coal accounts for about 70% of Mongolia's primary energy and makes up most of the electricity generation, accounting for about 87% of the domestic electricity production in 2019.

How much energy does Mongolia use?

Mongolia had a total primary energy supply (TPES) of 6.66 Mtoe in 2019. Electricity consumption was 7.71 TWh. Mongolia is a big producer of coal, which is mostly exported.

How can Mongolia improve its energy sector?

Mongolia's commitment to the Paris Agreement and the U.N. Climate and Clean Air Coalition 2030 are closely linked with Ulaanbaatar's pursuit of reinvigorating its energy sector. For these mega projects to be successful and fruitful, Mongolia must tackle corruption and strengthen the country's investor profile.

Will Mongolia prioritize the energy sector in 2024?

In 2024, energy experts and Mongolia's global partners are urging the Mongolian government to prioritize the energy sector. On December 4, after a few days of electricity shortages, the Energy Regulation Committee released a utility report tracking the previous week's energy usage. It highlighted a peak load of 1493 megawatts (MW) on November 30.

Does Mongolia need a coherent energy strategy?

A cohesive strategy aimed at improving the country's energy sector has become a dire necessity. In November 2023, Mongolia experienced days of intermittent energy shortages.

How can Mongolia manage energy demand & prevent power outages?

To manage the energy demand and prevent power outages, Mongolia's Energy Regulation Committee imported more energy from Russia and asked people to follow energy-saving practices. In 2024, energy experts and Mongolia's global partners are urging the Mongolian government to prioritize the energy sector.
