

What is inverter MPPT?

Inverter MPPT is discussed in EME 812 (11.3 DC/DC Conversion). In most applications, the solar inverters are exposed to ambient conditions such as solar radiation, temperature, and humidity. Inverters must comply with the conditions of the location to make sure they can work under ambient conditions listed in the specification sheet.

What is a solar inverter & MPPT charge controller?

An MPPT charge controller is a tracking device that makes a solar inverter (a crucial apparatus in your Solar Power which converts the DC power into AC, for a system required to produce output 220V or 110V consider installing one) more efficient. MPPT stands for Maximum Power Point Tracking in Solar inverters.

Do string inverters need MPPT technology?

MPPT technology is a necessity for all on-grid string inverters these days. Without one, a string inverter will not be able to perform well. Although MPPT has drawbacks, they're also the most economical option. Only MPPT in string inverters can ensure that a solar array is generating maximum power.

It is completely optional. Every model of our inverter has a specific solar controller rating and it determines how much maximum solar power it can deliver. For example, 3024MSE inverter has a 3kw max power output to load, but it comes with a 40A MPPT so based on 24v system voltage the max PV power = 1KW (Power Law).
