

Is solar energy a good choice for Kenyans?

Hezel, like many Kenyans, did not opt for solar energy solely out of a desire to safeguard the environment and combat climate change. She said it is a cost-effective alternative to relying on Kenya's primary energy provider. "It is a lot cheaper than what Kenya Power charges," she said.

Does Kenya have a solar market?

The solar market in Kenya is remarkable, and has served as a prototype in energy and policy development circles since its development is characterized with minimal direct government support and average support from international donor funded organizations ,,,.

Is solar energy making waves in Kenya?

A recent UNESCO report shows that solar energy is making waves in the remote regions of Kenya, which have long been deprived of conventional sources of power. For urban residents such as Hezel in Nairobi, the solar plant installed on her rooftop has become an enduring fixture in her plans for the foreseeable future. "The sun is always there."

Is solar the future of energy in Kenya?

The production process is known for its high energy consumption. But thanks to the implementation of solar panels, the company has managed to reduce a portion of its energy expenses. Ngare thinks that the future of energy in Kenya is solar.

Is solar energy a risk investment in Kenya?

Renewable energy (RE) and energy efficiency (EE) products and projects in Kenya are still viewed as higher risk investments by the financing organizations resulting to higher requirements for consumers, investors and developers. For detailed information on financing solar energy in Kenya, we referred to Refs. ,,,.

Is solar energy a new era of independence in Kenya?

Also, some remote regions in Kenya remain disconnected from the national power grid. The advent of solar energy has ushered in a new era of independence for individuals, said Annissa Osman, CP Solar's CEO. "Maybe 15 years ago the only solar item people used was a calculator."

The total amount of solar energy in Kenya ranges from 700 kW h/year in mountainous regions to 2650 kW h/year in arid and semi-arid areas, with most regions of the country lying in the range 1750-1900 kW h/year [30, p. 2966]. Notwithstanding, only a negligible amount out of this unlimited resource is already being harnessed.
