

What is New Caledonia Energy?

New Caledonia Energy is the entity responsible for developing the project for the new power station that will supply the energy for Sociéte Le Nickel (SLN). The current power station is nearly 50 years old and is highly polluting. The ultimate goal is to have a carbon-neutral plant by 2030, which would be a world first in the mining sector.

Why do we support New Caledonia's energy transition?

We are very proud to support their energy transition, and that of New Caledonia, said Thierry Muller, CEO of TotalEnergies Renewables France. "As industrial firms, we think and act responsibly. Our two companies are committed to protecting natural resources and biodiversity, and to improving the situation of local communities.

What is New Caledonia's energy transition plan?

Under its Energy Transition Plan New Caledonia plans to intensify research in renewable energy sources, establish regulatory standards (for example in transport and hydrogen), and ensure climate change is considered in all future public policy.

Who is greenwendenergy?

GreenWendEnergy (Pvt.) Ltd. is a privately held energy company that provides solar energy products and services as an alternate energy solution for diverse sectors including residential, commercial, industrial, and agricultural.

Where is wind power used in New Caledonia?

Wind power is a small part of the renewable energy market in New Caledonia and is used mainly at nickel refineries or as a back-up power source. The towns of Voh and Mont-Dore, home to the two main wind farms, are each also home to a nickel refinery. French companies also dominate this market segment.

Does New Caledonia have a wind farm?

To date New Caledonia has no offshore wind farms. Biomass energy production in New Caledonia only occurs at the Ouvrage (Fayaoué) power plant. This power plant, with a capacity of 300 kVA, consists of a generator running on diesel and coconut oil from a local coconut oil factory.

New Caledonia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

New Caledonia's energy mix is 97.7% fossil fuel, including 54.1% petroleum products (mainly fuel oil and diesel), 43.6% coal, and 2.3% renewable energies. This high energy dependence is directly linked to the

metallurgical industry which consumes 61.2% of the total energy consumption of the territory.

New Caledonia has a high and growing level of renewable energy (solar, wind, and hydro) covering its public, or non-industrial, demand. In two to three years renewable sources are expected to be sufficient to cover 100% of public demand. The bulk of New Caledonia's energy needs are however in the nickel refining sector.

New Caledonia aims to transition to 100% renewable energy in public distribution by 2025. New Caledonia has the ambition to develop recycling and waste management to facilitate nature conservation without hindering economic ...

The Akuo teams are continuing to develop several renewable energy projects in New Caledonia, by constantly highlighting the values that characterize us, combining the local production of green energy associated with innovative agricultural crops, with an approach that directly focuses on the expectations and needs of local communities and players.

By combining solar energy and energy storage to replace electricity generated from coal, TotalEnergies is demonstrating its ability to provide a sustainable energy solution to Prony Resources New Caledonia while meeting demanding local, industrial, environmental and social requirements.

New Caledonia renewable energy for 2015 was 14.09%, a 2.42% increase from 2014. New Caledonia renewable energy for 2014 was 11.67%, a 8.84% decline from 2013. New Caledonia renewable energy for 2013 was 20.51%, a 0.4% increase from 2012.

New Caledonia's Government has announced a new set of targets to try and cut the territory's dependence on imported fuel and increase the production of renewable energy sources. As part... RNZ

New Caledonia aims to transition to 100% renewable energy in public distribution by 2025. New Caledonia has the ambition to develop recycling and waste management to facilitate nature conservation without hindering economic development.

The Energy Transition Plan (STENC) defines New Caledonia's energy strategy for 2030. Adopted in June 2016, it constitutes the policy framework applicable until 2030. the STENC is structured around three main components: an extensive energy saving program, development of renewable energy to improve New Caledonia's energy self-sufficiency and a ...
