

What energy sources are used in New Zealand?

Electrical energy in New Zealand is mainly derived from renewable energy sources such as from hydropower, geothermal power and wind energy. The large share of renewable energy sources makes New Zealand one of the most sustainable countries in terms of energy generation.

When will the New Zealand energy strategy be published?

We will be updating this page over the course of the year. The strategy will be published by the end of 2024. The Government is developing the New Zealand Energy Strategy to support the transition to a low emissions economy, address strategic challenges in the energy sector, and signal pathways away from fossil fuels.

Who is New Zealand Energy Corp?

TSXV:NZ | New Zealand Energy Corp is an onshore formerly producing oil and gas company with substantial permitted acreage for new oil and gas production opportunities in New Zealand's only producing sedimentary basin, the Taranaki.

Can New Zealand achieve 100% renewable electricity by 2025?

Initially, the New Zealand Energy Strategy 2011-2021 established a target of achieving 90% renewable electricity by 2025. This target was subsequently broadened to an aspirational goal of attaining 100% renewable electricity by 2030.

Will New Zealand meet net zero by 2050?

To meet net zero by 2050, the New Zealand Government has committed to double renewable energy generation while supporting the country's long-term 'energy resilience'.

Is New Zealand a good country for energy?

New Zealand has a diversified energy mix, with significant production of both hydropower and geothermal. As the country embarks on an ambitious energy transition, it has many natural advantages, including a strong renewable resource base.

Energy use in New Zealand | May 2024 Page 1 | Energy use in New Zealand This report presents information about the energy consumption patterns in Aotearoa New Zealand, with analyses by fuel type and energy consuming sector. These findings come from statistics published by the Ministry of Business, Innovation & Employment (MBIE).

Where our energy comes from. Around 60% of New Zealand's energy is supplied by fossil fuels. Once energy losses and distribution are taken into account, fossil fuels make up about 70% of our total final consumption. This includes petrol and diesel for vehicles, coal and gas for industrial boilers and household gas and LPG.

New Zealand's energy production derives from both renewable and non-renewable sources. We import and export fossil fuels, which generates export revenue but also results in a dependency and vulnerability to energy commodity prices. These vary according to international supply and demand factors that are outside of New Zealand's control.

26 July, 2024 - Wellington, New Zealand -New Zealand Energy Corp. ("NZEC" or the "Company") (TSX-V: NZ) is pleased to announce that the Tariki Joint Venture, comprised of the Company's wholly owned subsidiary, NZEC Tariki Limited (as to 50%) and L& M Energy Limited (as to 50%), entered into a gas sales agreement on 26 July 2024 with an arms-length third ...
