

How does a photovoltaic inverter work?

After completing a set of electronics and safety auto-test routines, the inverter starts the grid connection process. As mentioned above, during this stage Aurora automatically tracks and analyzes the maximum power point (MPPT) of the photovoltaic field. Aurora indicates that insulation resistance was found to be too low.

How many inverters can a photovoltaic system handle?

The AURORA is capable of handling 2 separate arrays. If the output of photovoltaic system exceeds the capacity of a single inverter, additional Aurora inverters can be added to the system; each inverter will be connected to an adequate section of the photovoltaic field on the DC side and to the grid on the AC side.

How do I connect my inverter to a photovoltaic panel?

The electrical power and signals wiring from the inverter to the AC Grid and to the photovoltaic panel are connected through the Switch Boxes described in Fig.11 SB-01 - "DC Switch Box Layout" - using the access windows in pos "A" for the power cables and the windows in pos "D" for the signal cables.

Should PV systems be replaced by inverters?

As the number of PV systems already in operation for several years grows, demand for "revamping" by replacement of all the inverters in a project is estimated at several gigawatts per year and expected to increase rapidly through the 2020s. There are a number of reasons why project owners are taking interest in this strategy.

How do I dispose of a faulty inverter?

Store the inverter in a dry place where ambient temperatures are always between -25°C and +60°C. Do not dispose of faulty inverters or accessories together with household waste. Please accordance with the disposal regulations for electronic waste which apply at the installation site at that time.

How do I disassemble the inverter?

Disconnect the inverter as described in section 8. 2. Remove all connection cables from the inverter. Danger of burn injuries due to hot enclosure parts! Wait 20 minutes before disassembling until the housing has cooled down. Screw off all projecting cable glands. Lift the inverter off the bracket and unscrew the bracket screws.
