What is a wind turbine schematic diagram?

A wind turbine's schematic diagram offers a simplified yet insightful view into the process behind transforming wind energy into electricity. Here's a brief overview of the key elements typically included in such a diagram. The tall structure that supports the entire wind turbine.

What is a wind turbine rotor?

The rotating part of the wind turbine that consists of blades attached to a hub. The rotor captures the kinetic energy of the wind. Aerodynamically designed structures that catch the wind and convert its energy into rotational motion. The number and shape of blades can vary depending on the turbine design.

How does a wind turbine turn energy into electricity?

New animation shows how a wind turbine turns wind energy into electricity using the aerodynamic forcefrom the rotor blades.

How much power does a horizontal axis wind turbine produce?

Horizontal-axis wind turbines may produce less than 100 kW for basic applications and residential use or as much as 6 MW for offshore power generation. Even larger turbines are on the drawing board. The horizontal-axis wind turbine (HAWT) is a wind turbine in which the main rotor shaft is pointed in the direction of the wind to extract power.

How much electricity can a wind turbine generate?

The amount of electricity that a wind turbine can generate depends mostly on the size of the turbine, the area swept by the turbine blades, the air density, and the wind speed. The overall design of the wind turbine is also crucial for how efficiently the blades can capture the wind.

What is the difference between upwind and downwind turbines?

Upwind turbines--like the one shown here--face into the wind while downwind turbines face away. Most utility-scale land-based wind turbines are upwind turbines. The wind vane measures wind direction and communicates with the yaw drive to orient the turbine properly with respect to the wind.

At the rated output wind speed, the turbine produces its peak power (its rated power). At the cut-out wind speed, the turbine must be stopped to prevent damage. A typical power profile for wind speed is shown in Figure 2. ...
