What is a sodium ion battery?

Sodium-ion batteries (NaIBs) were initially developed at roughly the same time as lithium-ion batteries (LIBs) in the 1980s; however, the limitations of charge/discharge rate, cyclability, energy density, and stable voltage profiles made them historically less competitive than their lithium-based counterparts .

Where are sodium ion batteries made?

It celebrated the official production kick-off earlier this week with a ribbon-cutting ceremony at its Holland, Michigan manufacturing facility, calling it the first-ever commercial-scale production of sodium-ion batteries in the US.

Are battery companies building a sodium ion system?

Most of the push by battery companies to build sodium-ion systems is happening in China, but some of it is happening in other markets, including a plan by California-based Natron Energy to open its first large plant in Rocky Mount, North Carolina.
