We were recently tasked by the World Bank to look at power options for a small village in the Solomon Islands, and asked to compare the costs of a 100% renewable power system that had no diesel generator for ...

ADB Approves \$15.2 Million Solar Project for Solomon Islands. ADB today approved financing to support the Government of Solomon Islands and Solomon Power to convert electricity networks in five provinces almost entirely to solar power.

Solomon Power also supports the installation of small scale grid connected micro embedded generators that convert renewable energy into electricity that can be used in your home or business premises. Sources of renewable energy can include solar photovoltaic cells (PV) or micro-turbine systems.

A solar generator is a portable generator that usually works along with solar panels. It typically acts as an automatic backup battery to power your home and your household appliances and/or electronic devices when you run out of electricity due to power outages.

Solar energy can help save you money on your electricity bill by replacing some of your consumption from the Solomon power grid. Solar power systems have no moving parts, are extremely reliable, and have a long expected life span. They are self-cleaning, easy to install and require very little in the way of maintenance.

Types of Solar Power Systems
