

What is the energy sector in Bolivia?

The Bolivian energy sector, which is almost completely nationalized, is headed by the MHE (Ministerio de Hidrocarburos del Estado Plurinacional de Bolivia) whose mission, according to their website, is to create policies that promote the integrated development of the energy sector in a manner that is equitable and in harmony with Mother Earth.

Is biomass a source of electricity in Bolivia?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Bolivia: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

What is Bolivia's energy mix?

Bolivia's overall energy mix is dominated by fossil fuels, with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021, Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

What is the Global Solar Atlas?

The Global Solar Atlas provides a summary of solar power potential and solar resources globally.

When did Bolivia start exporting electricity to Argentina?

In March 2022, Bolivia began exporting electricity to Argentina via the Juana Azurduy de Padilla 132 kV electric transmission line, becoming an electricity exporter for the first time.

Why did Bolivia reduce its gas reserves in 2019?

During 2019, Bolivia announced a 30% reduction in gas reserves at the same time it began to experience an extended period of political turmoil leading many countries to shy away from long term contracts. Bolivia's rising domestic consumption and declining overall gas production will make Bolivian gas exports scarce by 2025.

Energética works to develop energy access using solar technologies in three realms: energy for the people, which seeks to meet the energy demands of families for lighting, communication and cooking; energy for the community, which develops projects to "strengthen social infrastructure" and services such as rural schools and clinics; and ...

In the global race towards renewable energy leadership, Bolivia is emerging as a formidable contender, outpacing giants like China in solar energy development. This remarkable journey ...

Most areas of the Bolivian Altiplano highlands receive a daily average of over 8 kilowatt hours per m² of

potential solar energy - some of the highest levels in the world - according to Global Solar Atlas

The Global Solar Atlas provides a summary of solar power potential and solar resources globally. It is provided by the World Bank Group as a free service to governments, developers and the general public, and allows users to quickly obtain data and carry out a simple electricity output calculation for any location covered by the solar resource ...

Global Photovoltaic Power Potential by Country. Specifically for Bolivia, country factsheet has been elaborated, including the information on solar resource and PV power potential country statistics, seasonal electricity generation variations, LCOE estimates and cross-correlation with the relevant socio-economic indicators.

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included.

From the data of future solar park construction, it is estimated that Bolivia will add 60 MW of solar energy to his grid by 2025. One researcher has estimated that Bolivia has a massive solar PV potential of 40 TW, capable of generating 70,000 TWh of electricity per year.

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

In the global race towards renewable energy leadership, Bolivia is emerging as a formidable contender, outpacing giants like China in solar energy development. This remarkable journey is not just about harnessing the sun; it's a blueprint for sustainable economic growth, energy independence, and environmental stewardship.

In March 2021, the Bolivian government introduced Supreme Decree 4477 which allows owners of small sized, distributed generated renewable energy systems (primarily solar) to sell excess power to the grid. Bolivia intends to expand their renewable energy sector with new projects but as of November 2021 had released no details. Lithium
