Can photovoltaic solar power be used in Ecuador?

Ecuador: in the Ecuadorian grid code, unconventional renewable sources, including photovoltaic solar plants, must be able to control the value of the rising and falling ramps according to what is established by the National Electricity Operator.

Why is the Ecuadorian electricity sector considered strategic?

The Ecuadorian electricity sector is considered strategic due to its direct influence with the development productive of the country. In Ecuador for the year 2020, the generation capacity registered in the national territory was 8712.29 MW of NP (nominal power) and 8095.25 MW of PE (Effective power). The generation sources are presented in Table 1.

What is the solar market in Ecuador?

The Ecuadorian solar market has been developed in rural areas to supply electricity to isolated areas. Approximately 5000 PV systems have been installed, mainly in the Amazon region; they provide 0.65 GWh/year . In the case of the country's PV energy plants, the capacity ranges between 0.37 MW and 1 MW.
