

Does leasing land for solar farms pay off?

Landowners and communities throughout North America are seeing first-hand how leasing land for solar farms and other renewable energy projects pays off. Allocating a portion of your land to lease for an energy project opens up a diversified and dependable income stream.

What is solar land leasing?

Solar land leasing involves granting the rights to develop and operate solar power installations on your land to a solar energy company or developer. Instead of purchasing the land outright, these companies lease the land from you, typically for a long-term period. How does solar land leasing work?

Do landowners get paid for a solar project?

The landowner typically receives annual lease payments or in some cases, may even sell a portion of their land for the solar project. The lease payments become a source of passive income for the landowner and help increase the use of clean energy.

How long does a solar farm lease last?

The lease requires the landowner to dedicate a portion of their land to solar for a set period, typically 20-25 years. During the operational period of the solar farm, the use of that portion of the land is limited and may require permission from the solar company.

How do I get a land lease for a solar farm?

You'll need to connect with a solar developer to secure a land lease for a solar farm. By following these four steps, you can put your land to use generating solar energy: If developers haven't tried to connect with you already, research which solar developers are offering solar farm leases in your area.

Do solar land leases affect property values?

While it's essential to consider the potential effects, studies have shown that solar land leases generally do not negatively affect property values. In fact, the additional income generated from leasing can contribute positively to a landowner's overall financial position. What are the financial obligations for landowners in solar leasing?
