

Why is Finland a good place to install solar panels?

“Finland's advantage is its low atmospheric temperature, which improves the efficiency of solar photovoltaic cells. The colder it gets, the better the solar panels work. Solar panels can also withstand snow loads if they are installed following directions.

Can solar power improve the profitability of buildings in Finland?

LUT University has investigated how the profitability of solar electricity could be improved in different types of buildings in Finland. Researchers have debunked myths related to the orientation and dimensioning of solar photovoltaic systems and sales of surplus electricity.

Does Finland have solar power?

There is plenty of solar energy available in Finland, and solar power is predicted to be one of the lowest-cost electricity production methods in the coming years.

How much solar power does Finland produce in 2022?

The Finnish Energy Authority states that in 2022, solar power production amounted to nearly 635 megawatts—more than a 240 megawatt increase compared to the previous year. Finland still produces fairly little solar electricity compared to leading European countries. The Netherlands, in contrast, produce over seven times more per capita.

Is solar energy a viable alternative to self-consumption in Finland?

In Finland, solar electricity has so far been a financially competitive alternative only if the self-consumption rate has been high. Now, however, the situation is changing, as solar farms are being built to produce electricity to sell directly to the main grid. Globally speaking, solar energy generation is a massive business.

Where can solar panels be installed?

Solar panels are becoming more frequent, as they are being installed in grocery stores, offices and public buildings. The best option for market-based expansion is to install solar panels in convenience stores and office and municipal buildings. New buildings require some type of cladding, so why not solar panels?

By generating some of your electricity with solar panels, you are also more self-sufficient when electricity transmission prices increase. Oomi will provide you with a solar panel package optimised for your needs as a turn-key delivery. We think that it is only fair. Check out solar power and read more about our solar panel packages!

We deliver and install solar panels in most regions of Finland. At present, the excluded regions are Lapland and Åland. We make it easy for you to take advantage of solar panels, and we ensure that your solar panels start ...

Here you can check answers to frequently asked questions, which will make it easier for you to select solar panels that meet your needs for your home. Size the solar power system according to the location's electricity consumption. We will help you select the right number of panels based on your electricity consumption.

Increased property value: Homes equipped with solar panels can potentially fetch a higher price in the market due to the cost savings and environmental benefits they offer. Government incentives: The Finnish ...

The payback period for solar panels in Finland is usually 7-15 years, but this can vary based on the size of the system, yield and initial costs. As technology develops and energy prices rise, the payback period may shorten.

Global capacity has doubled, which has led prices of modules to fall as much as 20 percent. In other words, when capacity doubles, prices plunge one fifth. The strong decline in prices of solar power systems has made solar electricity the least costly new form of electricity production nearly everywhere in the world.

We deliver and install solar panels in most regions of Finland. At present, the excluded regions are Lapland and Åland. We make it easy for you to take advantage of solar panels, and we ensure that your solar panels start producing electricity as expected.

Get solar panels for your roof easily. Request a quote via our website. Our experts carry out the mapping, planning and measurements related to the purchase of solar panels for your home. You may need a building or planning permit to install solar panels. We install the solar panels in one working day. You will receive guidance on using the system.

The companies in Solar Finland group are spread throughout the solar PV sectors each covering their own market areas. Whether it is manufacturing solar panels locally, designing and building production lines, or sales, design, and construction of comprehensive turnkey solar solutions, they all belong to the expertise area of Solar Finland.

Increased property value: Homes equipped with solar panels can potentially fetch a higher price in the market due to the cost savings and environmental benefits they offer. Government incentives: The Finnish government offers financial incentives like feed-in tariffs and tax breaks to encourage solar panel adoption.
