

Is it the solar panels that are leaking?

If solar panels are not ideally suited for your roof, poor installation tactics can make your roof leak. Roofs made from wood shingles, clay, slate, and terracotta tiles are particularly vulnerable to leaks and damage during installation.

Why does my roof leak after installing solar panels?

There are various reasons your roof could leak after installing solar panels. They mostly have to do with poor installation where mounting holes are not sealed properly, the top is incompatible with solar panels, or the roof is old and not designed for solar panels.

How do I fix a roof leak after installing solar panels?

If you're experiencing roof leaks after installing solar panels, contact a professional roofing contractor who specializes in solar panel installations for a thorough inspection. They can identify the source of the leaks and recommend appropriate solutions.

Do solar panels damage your roof?

While solar panels themselves will not inherently damage your roof, an improper installation can lead to problems down the line. It is crucial to ensure that the installation is done correctly by a professional, or with thorough research and proper planning if you choose to do it yourself.

Can solar panels be installed on a roof?

Most modern roofs are compatible and able to withstand the installation of solar panels, but in some cases, the roof material is susceptible to leaks. If your roof is made from clay, terracotta, wood shingles, or slate, there is an increased risk of leaks developing through the installation.

How do I know if my solar panel is leaking?

Detecting a roof leak under solar panels may not always be straightforward, but there are several signs that can indicate a problem. Keep an eye out for the following signs: Water stains or discoloration: Look for water stains on the ceiling or walls near the solar panel installation. These stains may appear as dark spots or patches.
