

Does solar installation work?

Whether commercial, home on or off-grid, we have a proven method of installation that works. We have installed more than 2000 solar systems across the country and that experience has become proficiency. Our process has been tried and tested. And as new technologies emerge, we continue to find better ways of giving the best value.

Why should I hire a professional for my solar system?

Hence it is of utmost importance to have your proposed solar system designed and sized by a qualified professional. As a company, we have successfully completed close to a thousand installations over nine years with each project different in size and scope. We have done both commercial and home installations, on and off-grid setups.

Are solar systems a good investment?

System paybacks are shorter than ever, 100% financed systems yield positive cash flows, there is a high annual rate of return compared to popular investment vehicles, and there is an immediate increase in home value. Please see the "Solar Payback and Financials", page for details!
