

With demonstrated charge times as low as 3 minutes and capacity retention for over 10,000 cycles in a lab-scale cell, Adden Energy is developing cutting edge technologies to enable mass adoption of EVs around the world and contribute greatly to a cleaner future.

In 2022, Adden Energy raised a \$5.15M seed round to transition the underlying technology from academic style pressed-powder coin cells into commercially-viable pouch cells for the EV industry.

No word yet on cost, but the Adden is betting that the battery's long lifespan will help make electric vehicles more affordable. New solid state energy storage technology is the next big thing, replacing the liquid in a conventional lithium-ion battery with a polymer, a high-tech ceramic or some other solid material.

Adden Energy's next-generation batteries are on track to reach the ambitious goal of EV parity with internal combustion engines by 2028. Based on solid-state battery technology originally developed at Harvard, Adden Energy combines two technologies that have long been goals of the EV industry - lithium metal and fast charging.

Adden Energy has developed lithium-metal solid-state battery technology that solves these issues. To scale production and bring this technology to car manufacturers, the company has raised \$15M...

The technology, licensed to Adden Energy, a Harvard spinoff company co-founded by Li and three Harvard alumni, has already scaled up to build a smartphone-sized pouch cell battery. Retaining 80% of its capacity after an impressive 6,000 cycles, this innovation showcases promising potential for commercial viability.

The technology has been licensed through Harvard Office of Technology Development to Adden Energy, a Harvard spinoff company cofounded by Li and three Harvard alumni. The company has scaled up the technology to build a ...

Page 1/2

Harvard's Office of Technology Development has granted an exclusive technology license to Adden Energy, Inc., a startup developing innovative solid-state battery systems for use in future electric vehicles (EVs) that would fully charge in minutes. Adden Energy has closed a seed round with \$5.15M in funding led by Primavera Capital Group, with ...

Adden Energy???Li??:"????????,????????????????????,????????????????,????????????????,????????? ...

Adden Energy, founded by a team of scientists at Harvard University, is developing and scaling up a brand-new type of solid-state battery. With demonstrated charge times as low as 3 minutes and capacity retention for over 10,000 cycles in a lab-scale cell, Adden Energy is developing cutting edge technologies to enable mass adoption of EVs ...

Adden Energy is one among many solid state battery innovators to overcome the ion movement hurdle, and they have also come up with a vigorous solution to the problem of dendrite formation,...
