How many years a solar PV module should be inspected?

by one of the IEC/NABL Accredited Testing Laboratories. PV modules used in solar power plant/systems must be warranted for 10 years for their material, manufacturing defects, workmanship. The output peak watt capacity which should not be less than

Are there any UK standards relating to a PV installation?

While many UK standards apply in general terms, at the time of writing there is still relatively little which specifically relates to a PV installation. However, there are two documents which specifically relate to the installation of these systems that are of particular relevance:

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.

Who is required to provide technical datasheets for solar PV panels?

The contractor must provide technical datasheets of the proposed solar PV panels. Preference will be given to panel manufacturers that have an Australian office and employees. Preference given to manufacturers that have Australian based technical support, servicing and warranty claim service.
