What is the fastest growing source of energy in Australia?

In recent years, wind and solar power have been the fastest growing source of energy in Australia. Renewable electricity in Australia is available from a number of green energy suppliers that supply electricity from environmentally friendly energy sources that are renewable and non-polluting.

What is the growth rate of solar energy in Australia?

Solar energy saw an annual growth rate of 56%, with wind energy at 16% over the same time period. Notably, approximately 30% of Australian households have installed solar photovoltaic (PV) systems, representing the highest adoption rate worldwide. Since the 1990s the electricity sector in Australia has seen a wave of privatisation.

These fossil fuel power stations burn coal to power steam turbines that generate some or all of the electricity they produce. Australia's fleet of coal-fired power stations are aging and many are due for decommissioning, and are being replaced by a combination of mostly renewable energy. In early 2017, 75% of the coal-fired power stations in the country were operating beyond their original design life.
