

To combat climate change, the Dutch government wants to reduce the Netherlands' greenhouse gas emissions by 49% by 2030, compared to 1990 levels, and a 95% reduction by 2050. These goals are laid down in the Climate Act on May 28, 2019. The Climate Plan, the National Energy and Climate Plan (NECP) and the National Climate Agreement contain the policy and ...

In 2022, the Netherlands produced roughly the same amount of energy as in 2021 (118 billion kWh). Renewable energy production rose by 20 percent, and fossil fuel production decreased by 11 percent. Renewable sources accounted for 40 percent of the total electricity production, marking an increase from the previous year when it stood at 33 percent.

Our plant on De Constant Rebecqueplein is one of the oldest power plants still in operation in the Netherlands. Here, we produce both electricity and heat. This location also serves as an energy hub where innovative sustainable solutions are integrated.

An essential energy source for homes and industries in the Netherlands. At Uniper, we provide reliable heating solutions that contribute to a sustainable and efficient energy supply. Discover how our heat production plays a crucial role in the energy transition. Image. ... he Netherlands has a strategy for the energy system of the future, with ...

The Dutch government has set the target of halving greenhouse gas emissions by 2030. Recognising the significance of renewable energy in achieving this target, the Netherlands Energy Research Association (NERA) is actively involved in promoting and advancing sustainable energy solutions.

Netherlands: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO<sub>2</sub> - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

Since July 1, 2021, anyone with an old energy metre in the Netherlands is charged the same rate night and day -- meaning they can't use the reduced night tariff. If you switch to a smart energy metre, you can keep getting those sweet discounts AND only pay for the power you actually use! Cha-ching! ?

The Netherlands is using more and more energy and its gas reserves are running out. Among other things, the country will need to switch to alternative energy sources for transport and heating. Work on this must start now. The ...
