

# The latest market analysis of solar power generation

What is the global solar power market size?

The global solar power market size was valued at USD 253.69 billion in 2023 and is projected to be worth USD 273 billion in 2024 and reach USD 436.36 billion by 2032, exhibiting a CAGR of 6% during the forecast period. North America dominated the solar power industry with a market share of 41.30% in 2023.

What is the global solar PV market like in 2022?

The solar PV market is dominated by crystalline silicon technology, for which the production process consists of four main steps: In 2022, global solar PV manufacturing capacity increased by over 70% to reach 450 GW for polysilicon and up to 640 GW for modules, with China accounting for more than 95% of new facilities throughout the supply chain.

What was the value of the solar power market in 2023?

Fortune Business Insights says that the global market size was valued at USD 253.69 billion in 2023 and is projected to reach USD 436.36 billion by 2032. What was the value of the Asia Pacific solar power market in 2023?

Will solar power grow in 2022?

The market is assessed to grow at a CAGR of 7.7% between 2024 and 2032, reaching around 400.22 GW by 2032. Three-quarters of all renewable capacity additions globally in 2023 came from solar PV alone. Power generation from solar PV increased to a record 270 TWh in 2022, up 26% from 2021.

How will solar PV & wind impact global electricity generation?

The share of solar PV and wind in global electricity generation is forecast to double to 25% in 2028 in our main case. This rapid expansion in the next five years will have implications for power systems worldwide.

What is solar power market research report?

The research report offers a qualitative and quantitative in-depth industry analysis of the global market. It further details the adoption of solar power systems across several regions. The report provides a detailed competitive landscape by presenting information on key players and their strategies in the market.

In-brief analysis January 16, 2024 Solar and wind to lead growth of U.S. power generation for the next two years ... As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from ...

US power production has been becoming less water-intensive, with the amount of water required to produce power falling from 14,928 gallons per megawatt hour (gal/MWh) in 2015 to 11,595 gal/MWh in 2021. 61 This is largely due to a shift ...

# The latest market analysis of solar power generation

South Africa Solar Energy Market Analysis The South Africa Solar Energy Market size in terms of installed base is expected to grow from 6.68 gigawatt in 2024 to 11.03 gigawatt by 2029, at a ...

The global solar power market, valued at USD 232.48 billion in 2023, is expected to grow at a 7.1% CAGR, reaching USD 431.02 billion by 2032. ... Stay ahead with the latest trends and market analysis. ... Countries are now focussing on ...

In addition to public net electricity generation, total net electricity generation also includes in-house generation by industry and commerce, which is mainly generated using gas. ...

Stay ahead with the latest trends and market analysis. Global Solar Energy Market Outlook. ... Power generation from solar PV increased to a record 270 TWh in 2022, up 26% from 2021. ...

In 2023, an estimated 96% of newly installed, utility-scale solar PV and onshore wind capacity had lower generation costs than new coal and natural gas plants. In addition, three-quarters of new wind and solar PV plants offered cheaper ...

The global solar power market is projected to grow from \$253.69 billion in 2023 to \$436.36 billion by 2032, at a CAGR of 6% in the forecast period ... Solar Power Market Trends. Integration of New ...

The Solar Power Plant Market size was valued at USD 143.12 Billion in 2023 and the total Solar Power Plant Market revenue is expected to grow at a CAGR of 11.64% from 2024 to 2030, reaching nearly USD 309.34 Billion. The Solar ...

In 2025, renewables surpass coal to become the largest source of electricity generation. Wind and solar PV each surpass nuclear electricity generation in 2025 and 2026 respectively. In 2028, ...
